

# Release v20.10.0

---

- GoSilent Cube (GSC)
- GoSilent Server (GSS)
- Release Date - November 2020
- About Attila - <http://www.attilasec.com>

## Overview

---

This software release contains user and role management for the GoSilent Server (GSS) as well as a dedicated management interface.

## GoSilent Cube (GSC) Improvements:

---

The following improvements were made to the GoSilent Cube (GSC):

- Allow the client administrator to change usernames
- Minor user interface bug fixes

## GoSilent Server (GSS) Improvements

---

The following improvements were made to the GoSilent Server (GSS):

- User management to add, update and delete console users
- Allow the server administrator to change usernames
- A new user role to grant a Security Manager the ability to manage VPN credentials
- Log output from the Core TUI is included in the diagnostics
- Load test metrics were captured for the Dell R640 server
- Minor user interface bug fixes

## Cube Limitations

---

- Wi-Fi cannot connect to an Apple iPhone or iPad hotspot with an apostrophe in the SSID.
  - Workaround: Change the name of your iPhone or iPad to a name that only has alphanumeric characters. Instructions can be found here: <https://support.apple.com/en-ca/HT201997>
- LAN Wi-Fi range should be limited to a radius of 10-15 feet (size of hotel room)

## Server Known Issues

---

- CS181: Restoring from a previous server backup may inadvertently disable the file system check.
  - Workaround: After the restore completes, disable and then re-enable the file system check in the system settings.
- HC339: Edge browser only. After modifying the server WAN settings and rebooting, the IPv4/IPv6 radio buttons are not properly selected.
  - Workaround: A hard refresh of the browser will properly display the radio buttons.
