

# Attila Security - Release v19.07.4

---

- SilentEdge Enterprise Server (SEES)
- Release Date - August 2020
- About Attila - <http://www.attilasec.com>

## Overview

---

The v19.07.4 (Patch 4) release is targeted toward server improvements. There are no changes to the GoSilent Client, which remains at v19.07.3. This release of the server contains all of the cumulative changes of the prior patches from v19.07.3 and v19.07.2.

## Additional SEES Improvements

---

The following improvements were made to the SilentEdge Enterprise Server (SEES)

- Added a dedicated network interface for management, separating LAN and management traffic
- Fixed a bug that did not allow advanced firewall rules to be saved for IPv6

## Known Limitations

---

- Wi-Fi cannot connect to an Apple iPhone or iPad hotspot with an apostrophe in the SSID.
  - Work around: Change the name of your iPhone or iPad to a name that only has alphanumeric characters. Instructions can be found here: <https://support.apple.com/en-ca/HT201997>
- LAN Wi-Fi range should be limited to a radius of 10-15 feet (size of hotel room)
